Sustainability Economics: Introduction

John Janmaat

October 9, 2026

Systems

- A system is a collection of elements and their connections.
- A social ecological system contains elements in both the social (human) and ecological (nature) domains, and has connections crossing between the domains.
- A system is complex when there are 'emergent' properties that cannot be predicted looking at elements in isolation.
- A system is adaptive if it continuously evolves or changes in response to internal and external forces.

Systems

Mathematical Representation

$$f(x) = \alpha + \beta x + \varepsilon$$
